

### FORTINET SECURITY ASSESSMENT

#### A FORTINET CYBER THREAT ASSESSMENT (CTAP) CAN HELP YOU BETTER UNDERSTAND:

##### SECURITY AND THREAT PREVENTION

Which application vulnerabilities are attacking your network, which malware/botnets were detected, and which devices are “at risk” for firewall assessment and security breach probability.

##### USER PRODUCTIVITY

Which peer-to-peer, social media, instant messaging, and other apps are running for application visibility control.

##### NETWORK UTILIZATION AND PERFORMANCE

What are your throughput, session, and bandwidth usage requirements during peak hours — network utilization and monitoring tests for performance optimization.

##### TRUSTED PARTNERS

Fortinet’s Cyber Threat Assessment includes deployment of a FortiGate NGFW on your network for up to seven days — without interruptions to your existing infrastructure. This will allow CTAP to will uncover in-depth information about the current state of your network, encompassing key areas of security threats, productivity, and performance.

A PDF deliverable will be provided for review post data processing window. Additional assessments available from XenTegra.
